# Axios

---

## Mise en place

---

```
npm install axios
```

```
// utils/axios.js
import axios from "axios";

export const axiosInstance = axios.create({
  baseURL: 'https://domain.com/api',
  timeout: 1000,
  headers: {
    'X-Custom-Header': 'toto'
  }
});
```

## Utilisation : GET

---

```
import { axiosInstance as axios } from "utils/axios";

axios({
  method: 'get',
  url: '/users?id=123'
})
.then((response) => console.log(response))
.catch((error) => console.log(error));
```

## Utilisation : POST

---

```
axiosInstance({
  method: 'post',
  url: '/users',
  data: {
    userName: "Toto",
    email: "toto@aflokkat.com"
```

```
}  
}).then(() => {}).catch(() => {});
```

## Response Schema

---

```
{  
  data: {},  
  status: 200,  
  statusText: 'OK',  
  headers: {},  
  config: {},  
  request: {}  
}
```
